            regions of human immunoglobulin E (1gg) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of 1gg mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient. AMUG632-AMUG913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin E (IGE) suitable to be cyclised and used in the invention

WPI; 1996-425218/42.

Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.

Claim 2; Page 42; 58pp; English.

Pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MMC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is an internal peptide of herpes

and AAB08890 are sequences used in the exemplification of the present

                                                                               The polynucleotide sequences given in AAA39052 to AAA39088 encode the human secreted proteins given in AAB08891 to AAB08894. The human secreted proteins given in AAB08891 to AAB08894. The human secreted proteins and have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytostatic; anti-cardive; immunosuppressive; antibacterial; and vulnerary. The secreted proteins and their related polynucleotide sequences are useful for diagnostic and therapeutic methods useful for diagnosting and treating ollowing secreted proteins. The proteins and polynucleotide sequences are useful colynucleotide sequences are useful sequences are useful for diagnosting and freating disorders infectious disease.

CC dispansion of tissues, for chemotaxis and for screening molecules that be proteins. The proteins or polynucleotide sequences may be used as food additives or preservatives, to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, antegonists of the proteins may be used to prevent scar tissue growth during wound healing, and hyper-vascular diseases. The composition and methods are useful in disgnosing, preventing or treating Portine reproductive and respiratory syndrome virus (PRRSV) infection. The polyclonal or monoclonal antibodies specific to epitope B, or the monospecific chimeric mouse/porcine antibodies obtained by recombinant DNA technology specific to epitope B, are used to facilitate cure of infected animals or prevention of animals at risk of infection with PRRSV. This is the amino acid sequence of a porcine reproductive and respiratory syndrome virus (PRRSV) gps peptide screened using anti-PRRSV specific swine-antibodies to identify protective epitopes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolating neutralizing epitopes of a pathogen for vaccination purposes comprises obtaining sera with and without neutralizing antibodies from a species and using the difference between the sera to isolate neutralizing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel isolated nucleic acid molecule which encodes a polypeptide that specifically binds to at least a portion of an inhibitor of apoptosis protein (IAP). The invention may be useful for the development of compounds with an anti-HIV, noctropic, neuroprotective, vasctropic, cytostatic or immunosuppressive activity through the inhibition or stimulation of caspase. The nucleic acid molecules and peptides or polypeptides are useful for inducing apoptosis and identifying inhibitors or enhancers of apoptosis for treating AIDS, diseases. The present sequence is that of a fruit fly (D melanogaeter) derived IAPP inhibitor) peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecules encoding a peptide or polypeptide that binds to a portion of an inhibitor of apoptosis protein, useful for inducing apoptosis and identifying inhibitors or enhancers of apoptosis for treating AIDS, or cancer.

The invention relates to polynucleotides encoding an Omi (serine protease) peptide or polypeptide. The Omi peptide specifically binds to a portion of an Inhibitor of Apoptosis Protein (IAPD). The Omi polypeptide induces caspase-independent apoptosis, or fails to have serine protease activity. The Omi peptides are useful for regulating or altering activity. The Omi peptides are useful for regulating or altering activity. The Omi peptides are useful for regulating or altering apoptosis, specifically caspase-mediated apoptosis, and as immunogens for raising antibodies. Enhancers of apoptosis are useful for treating cancers, tumours or for destroying cells that mediate autorimmune diseases. Compositions may also be used for the treatment of diseases canced generative diseases and ischaemic injury. The antibodies can be used in isolating Omi peptides, polypeptides and their variants, in clantifying molecules that interact with Omi peptides and polypeptides. Sequences ABP71310-315 represent fragments of various and polypeptides. Sequences ABP71310-315 represent fragments of various in Inhibiting proteins, used to determine Omi as a IAP-binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
New Omi nucleic acids and peptides that bind to an inhibitor of apoptosis proteins, useful for regulating or altering caspase-mediated apoptosis and for treating cancer, tumor, or autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             caspase-9; anti-HIV; nootropic; neuroprotective; vasotropic; cytostatic; immunosuppressive; inhibitor of apoptosis protein; IAP; caspase-9 N-terminal linker; procaspase-9; cysteine protease; caspase-3;

The invention relates to immunoassay for detecting the presence of PrP-Sc (prion) protein as an indication of transmissible spongiform
                                                                                                                     Prion, PrP-Sc protein, transmissible spongiform encephalopathy, TSE; ruminant; immunoassay; third eyelid-associated lymphoid tissue; epitope; neurodegenarative disorder; scrapie; bovine prion protein.
                                                                           Peptide fragment from bovine prion protein (residues 146-159).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Assay for detecting prion (PrP-Sc) protein - as indicator for transmissible spongiform encephalopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             O'rourke KI, Knowles DP, Baszler TV, Parish SM;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule comprising a polynucleotide that encodes a polypeptide or peptide, or its variants considered that encodes a polypeptide or portion of an inhibitor of appotosis protein (IAP). Also included are a peptide or a polypeptide cappetosis protein (IAP). Also included are a peptide or a polypeptide comprising at least an N terminus sequence of caspase-9 N-terminal binds at least a portion of a procaspase-9 that specifically binds at least a portion of an IAP and a second portion of a procaspase-9 containing a mutated active stee, where the peptide or polypeptide exhibits caspase-3 where the peptide or polypeptide exhibits caspase-3, where the peptide or polypeptide exhibits caspase-3, which fails to undergo normal processing and possesses wild cor polypeptide exhibits caspase-3 which fails to undergo normal processing and possesses wild type caspase-9 enzymatic activity, a nucleic acid molecule comprising a polynucleotide sequence that encodes the caspase-9 N-terminal linker), and type caspase-9 enzymatic activity, a nucleic acid a host cell containing the expression vector, an antibody that specifically binds to containing the expression vector, an antibody that specifically binds to the peptide or polypeptide, an antibody that specifically binds to the eptice or polypeptide, an antibody that specifically binds to the eptice or polypeptide an antibody that specifically binds to the eptice or polypeptide in a cell or stimulating of campound that inhibiting or enhancing apoptosis in a cell or stimulating operation or caspase-mediated apoptosis, in a cell or stimulating for inhibiting or enhancing apoptosis in a cell. The nucleic acid molecules and peptides or compound for inhibiting or enhancing apoptosis in a cell. The nucleic acid molecules and peptides or enhancers of apoptosis for treating ADDS, neurodegenerative enhancers of apoptosis for treating ADDS, neurodegenerative enhancers autoimmune diseases. The present sequence is attended to the protection of a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

This invention describes a novel tumor-associated oligopeptide that is recognized as an antigen by CD8+ cyctoxic T lymphocytes (CTL) and causes CTL-induced lysis and/or apoptosis of tumor cells, especially multiple or the oligopeptide is derived from human PRDI-BF1 (positive regulatory domain I-binding factor-1) which is able to induce an MHC (major histocompatibility complex) Class I allele variant A2-restricted immune response of CD8+ CTL against tumor cells. The products of the invention have cytostatic activity and can be used in a vaccine. The peptide of the invention, also related retro-inverse and pseudopeptides, fusion proteins (FP), polymucleotides, vectors, host cells and antibodies and cell receptors specific for PRDI-BF1 peptides are useful for treating diseases associated with PRDI-BF1 peptides are useful for treating diseases associated with PRDI-BF1, particularly tumors. The products of the invention are also useful as diagnostic, therapeutic and prophylactic agents for detecting, modifying, generating, expanding conducts of to regulating activation and functional status of T cells, and for preparation of poly- or mono-clonal or recombinant A2-restricted T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tumor; antigen; CD8+ cytotoxic T lymphocyte; CTL; CTL-induced lysis; multiple myeloma cell; human; PRDI-BF1; positive regulatory domain I-binding factor-1; MHC; major histocompatibility complex Class I; cytostatic; vaccine.
                                                                                                                                                                                                                                                                                                                                  New tumor-associated oligopeptide, useful particularly for treating multiple myeloma, is recognized by CD8 cytotoxic T cells, also derivatives and related nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
major histocompatibility complex Class I; cytostatic; vaccine.

This invention describes a novel tumor-associated oligopeptide that is recognized as an antigen by CD8+ cytotoxic T lymphocytes (CTL) and causes TCTL-induced lysis and/Ora apportais of tumor cells, especially multiple myeloma cells. The oligopeptide is derived from human PRDI-BFI (positive regulatory domain I-binding factor-1) which is able to induce an MHC (major histocompatibility complex) Class I allele variant A2-restricted immune response of CD8+ CTL against tumor cells. The products of the invention have cytostatic activity and can be used in a vaccine. The peptide of the invention, also related retro-inverse and pseudopeptides, can proteins (PP). Polymucleotides, vectors, host cells and antibodies and T cell receptors specific for PRDI-BFI, particularly tumors. The products of the invention are also useful as diagnostic, therapeutic and products of the invention and succine and status of T cells and/Or regulating activation and functional status of T cells, and for preparation of poly-common-cloud or recombinant A2-restricted T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, human leukocyte antigen; HLA epitope; cytotoxic T lymphocyte; CTL; MAGE2; MAGE3; melanoma antigen gene; immune response; vaccine; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gapa
                                                                                                                                                                                   New tumor-associated oligopeptide, useful particularly for treating multiple myeloma, is recognized by CDB cytotoxic T cells, also derivatives and related nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The present invention describes MAGE2/3 epitopes (I). Also described are:

(1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and binds to a complex of (I); (2) a peptide (II) comprising (I) and a second epitope and has less than 50 contiguous amino acids; (3) a vaccine composition comprising (II), a unit dose of a peptide with at least 50 contiguous amino acids with 100% identity to the native peptide sequence of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid encoding (II). (I) has cytostatic activity, and can be used in vaccines and as an immunostimulant. A vaccine of (3) is useful for the treatment and immunostimulant. A vaccine of (3) is useful for monitoring or evaluating an immunostimulant and human leukocyte antigen (HLA) allele present in the patient and detecting the presence of the T-lymphocyte that binds to the patient and detecting the presence of the T-lymphocyte that binds to the compine epitopes derived from multiple tumour-associated molecules reducing the likelihood of tumour escape due to antigen loss. AAG84515 to AAG84909 and AAB99725 consent amino acid sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; human leukocyte antigen; HLA epitope; cytotoxic T lymphocyte; CTL;

The present invention describes MAGE2/3 epitopes (I). Also described are:

(1) a clonal cytotoxic T lymphocyte (CTL) that is cultured in vivo and
binds to a complex of (I); (2) a peptide (II) comprising (I) and a second
epitope and has less than 50 contiguous amino acids; (3) a vaccine
composition comprising (II), a unit dose of a peptide with at least 50
contiguous amino acids with 100% identity to the native peptide sequence
contiguous amino acids with 100% identity to the native peptide sequence
of MAGE2/3, and a pharmaceutical excipient; (4) an isolated nucleic acid
encoding (I); and (5) an isolated nucleic acid encoding (II). (I) has
cytostatic activity, and can be used in vaccines and as an
cimmunostimulant. A vaccine of (3) is useful for the treatment and
prevention of cancer. (I) is useful for monitoring or evaluating an
commune response by incubating a T-lymphocyte sample from a patient with
(I) that binds to an human leukocyte antigen (HLA) allele present in the
peptide. The vaccine allows the opportunity to combine epitopes derived
from multiple tumour-associated molecules reducing the likelihood of
tumour escape due to antigen loss. AAG84515 to AAG84199 and AAB99725
c tumour escape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunogenic peptide; human leukocyte antigen; HLA-A2.1 binding motif; immunostimulant; cytostatic; antiviral; glycoprotein; cytotoxic T cell; viral disease; prostate cancer; hepatitis B; hepatitis C; lymphoma; AIDS; renal carcinoma; cervical carcinoma; condyloma acuminatum.
                                                                          treatment, prevention and diagnosis of pathological states such as viral diseases and cancers, including prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, apphonen, and condyloma acuminatum. The peptides are diseased for treatment of chronic infection and for stimulating the immune system to eliminate virus-infected cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequences AAU26558-AAU27161 represent immunogenic peptides containing a human leukocyte antigen A2.1 (HLA-A2.1) binding motif. The peptides of the invention are capable of specifically binding glycoproteins encoded by HLA alleles and inducing a cytotoxic T cell response against an antigen in a patient expressing HLA-A2.1. This method is useful for the treatment, prevention and diagnosis of pathological states such as viral diseases and caneers, including prostate cancer, hepatitis B, hepatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human Leukocyte Antigen (HLA) HLA-A2.1 immunogenic binding peptide #360.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           infection and
human leukocyte antigen A2.1 (HLA-A2.1) binding motif. The peptides of the invention are capable of specifically binding glycoproteins encoded by HLA alleles and inducing a cytotoxic T cell response against an antigen in a patient expressing HLA-A2.1. This method is useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   carcinoma, cervical carcinoma, lymphoma, and condyloma peptides are used for treatment of chronic infection at the immune system to eliminate virus-infected cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences AAU26558-AAU27161 represent immunogenic peptides containing a human leukocyte antigen A2.1 (HLA-A2.1) binding motif. The peptides of the invention are capable of specifically binding glycoproteins encoded by HLA alleles and inducing a cytotochar cell response against an antigen in a patient expressing HLA-A2.1. This method is useful for the treatment, prevention and diagnosis of pathological states such as viral diseases and cancers, including prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, and condyloma acuminatum. The peptides are used for treatment of chronic infection and for stimulating the immune system to eliminate virus-infected cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human Leukocyte Antigen (HLA) HLA-A2.1 immunogenic binding peptide #186.
                                                                                                                                                                                                              Human Leukocyte Antigen (HLA) HLA-A2.1 immunogenic binding peptide #185.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Composition for treating viral diseases and cancer comprises an immunogenic peptide having an HLA-A2.1 binding motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

```
Immunogenic peptide, human leukocyte antigen; HLA-A2.1 binding motif; immunostimulant; cytoetatic; antiviral; glycoprotein; cytoctoxic T cell; viral disease; prostate cancer; hepatitis B; hepatitis C; lymphoma; AIDS; renal carcinoma; cervical carcinoma; condyloma acuminatum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences AAU26558-AAU27161 represent immunogenic peptides containing a human leukocyte antigen A2.1 (HLA-A2.1) binding motif. The peptides of the invention are capable of specifically binding glycoproteins encoded by HLA alleles and inducing a cytcoxic T cell response against an antigen in a patient expressing HLA-A2.1. This method is useful for the treatment, prevention and diagnosis of pathological states such as viral diseases and cancers, including prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinoma, cervical carcinoma, according a condition and condyloma acuminatum. The peptides are used for treatment of chronic infection and for stimulating the immune system to eliminate virus-infected cells
                                                                                                                                                                                                                                                                                                                                                                                                                              Composition for treating viral diseases and cancer comprises an immunogenic peptide having an HLA-A2.1 binding motif.
                                                                                                                                                                                                                                                                                                                                                     Southwood S;

Pemphigus vulgaris auto-antigens and multiple sclerosis non-self antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in auto-immune disease.

Claim 2; Page 43; 58pp; English.

Pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This 15 residue inhibitory peptide is based on part of the sequence of a 52/48KD polypeptide fragment from Von Willebrand factor. The polypeptide corresponds to residues 449-729 of WWP. Other 15 residue beginde based on other regions of the same fragment of VWP are also found to inhibit binding to platelets and heparin. A more potent inhibitor could be produced by linking two or more of these peptides. On its own this peptide reduces WWP binding to platelets to 20% (c.f. 52/48kD fragment reduces binding to 0%), See also AAPR3761-P82805 and AAPR2807-P82810. (Updated on 25-MAR-2003 to correct PA field.)
the autoimmune disease. This peptide is an internal peptide of the adenovirus type 12 ORF and is implicated as a foreign epitope involved in the actiology or in remissions of multiple sclerosis. It has been shown capable of inducing the proliferation of autoreactive T-cell clones isolated from multiple sclerosis patients. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptide fragments of Von Willebrand factor - inhibit binding of Von Willebrand factor to platelets, heparin and collagen, used for treating

                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                      This peptide fragment represents an anion exchange DIDS binding motife which is found in a novel sodium bicarbonate transporter (NBC). The novel NBC proteins and nucleic acid sequences may be used to treat pathological processes including water retention, increased blood pressure, chronic respiratory and metabolic acidosis, inflammation, cell proliferation, cancer, sperm activation/inactivation, hydroencephaly, epilepsy, glaucoma cancer, sperm activation/activation, hydroencephaly, epilepsy, glaucoma cancer, sperm activation activation of family of proceins can be used (i) as a target to identify agents that block or stimulate NBC mediated pH regulation, (ii) as a target or bait to identify and isolate binding partners that bind NBC, (iii) in methods to identify and isolate binding partners that bind NBC, (iii) in methods to identify and isolate binding partners that bind NBC, (iii) in methods are also useful as modulators of NBC-mediated activity, useful in the immunoassays for detecting NBC expression/activity and for purifying an NBC protein
                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, epitope, autoimmune disease, myasthenia gravis;

                                                                                                                                                                                                                                                                              acetylcholine receptor (AACHR) oligopeptide of about 12 to 20 amino acids. The peptides form a set of 69 overlapping antiqenic peptide epitopes which show various affinities for human leukocyte antigenic peptide epitopes and DR3. Also included is a composition comprising an antigenic peptide antigenic binding site, where binding of the peptide to the binding site, and a Major histocompatibility complex (MHC) component having an antigenic binding site, where binding of the peptide to the binding site induces non-responsiveness in a target T cell in a mammal, where the MHC component is an MHC class II component. Peptides with affinity for HLA-DR2 and DR-3 from proteins other than ACHR are also included. The composition is used to treat mysathenia gravis and other autoimmune diseases. The present sequence is an antigenic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human cytokinesis regulatory protein 55, the polynuclectide encoding it, the process for preparing the polypeptide by DNA recombinant technology, the application of the polypeptide in treating several diseases such as cancer, haemopathy, HIV infection. The present sequence is that of a peptide, useful to the invention
Peptide epitopes of the acetylcholine receptor target helper T cells recognize an antigen in association with an MMC component and are useful to treat autoimmune disease particularly myasthenia gravis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polypeptide-human cytokinesis regulating protein 55 and polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present invention describes a composition (I) which comprises at least one human leukocyte antigen (HLA) binding peptide comprising an isolated, prepared epitope comprising one of 547 8-11 residue amino acid sequences (SI), given in AAB75803 to AAB7649. (I) has cytostatic, virucide, hepatotropic, antiinflammatory, anti-HIV (human sequences (SI), given in AAB75803 to AAB7649. (I) has cytostatic, commediciency virus) and protozoacide activities, which can be used in manunodeficiency virus) and protozoacide activities, which can be used in vaccine production and is an inducer of cytotoxic T-cell response. (I) is useful for inducing a cytotoxic T cell response against a preselected custus (MHC) class I allele, by contacting cytotoxic T cells (CTLs) from the patient with (I). (I) is useful as a vaccine to treat and/or prevent viral infection and cancer such as prostate cancer, hepatitis B, hepatitis C, human papilloma virus (HPV) infection, cytomegalovirus (CMV), acquired immunodeficiency syndrome (AIDS), renal carcinoma, lymphoma, malaria, and condyloma acuminatum
                                                                              Human leukocyte antigen; HLA; major histocompatibility complex; MHC; cytocoxic T lymphocyte; CTL; human class I MHC; immunogenic; HLA binding peptide; immune response; glycoprotein; cytostatic; virucide; hepatotropic; antiinflammatory; anti-HIV; vaccine; human immunodeficiency virus; protozoacide; viral infection; cancer; protecte cancer; hepatitis B; hepatitis C; human papilloma virus; HPV; cytomegalovirus; CMV; acquired immunodeficiency syndrome; AIDS; renal carcinoma; cervical carcinoma; lymphoma; malaria;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Composition comprising human leukocyte antigen binding peptide which comprises isolated, prepared epitope useful for treating viral infections such as acquired immunodeficiency syndrome, and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Breast cancer membrane protein (BCMP) peptide SEQ ID NO:368

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the use of peptides as claudin-mediated cell adhesion modulators. The claudin-5 group of proteins are cadherins, which are membrane glycoproteins involved in cell adhesion. In some situations, cell adhesion occurs at abnormal levels, and these peptides can be used to modulate these levels, and thus treat autoimmune diseases, inflammatory diseases and cancer, and aid wound healing and implant adhesion. In addition, they can also be used to facilitate drug delivery to the desired target site. The present sequence has a cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antibody modulation of claudin-mediated cell adhesion for increasing vasopermiability, for delivering drugs to tumors and the nervous system and across the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                       The present invertion describes a method of screening for and/or diagnosing breast cancer in a subject, and/or monitoring the effectiveness of breast cancer therapy. The method comprises detecting and/or quantifying in a biological sample obtained from the subject a breast cancer membrane protein (BCMP) polypeptide and a nucleic adid molecule. Also described: (1) an antibody, its functionally-active fragment, derivative or analogue, that specifically binds to one or more of the BCMP polypeptide, reagents and instructions for reagent specific for an BCMP polypeptide, reagents and instructions for use; (3) a method for screening for anti-breast cancer agents that interact with the BCMP polypeptide, comprising contacting the polypeptide with a candidate agent, and determining whether or not the candidate of the borse agent interacts with the polypeptide; (4) a method for screening for anti-breast cancer agents that modulate the expression or activity of an BCMP polypeptide, the polypeptide or not the control agent, and determining whether the candidate agent or in the presence of a control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent or in the presence of a control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent control agent, and determining whether the candidate agent control to change; and (5) an agent identified by the method of (3) or (4), which interacts with the polypeptide, nucleic acid molecule to change. BCMPs have cytostatic activities, and can be used in candidate agent control agent agent agent activities, and can be used in the presence of a control agent agent activities, and can be used in control agent agent agent activities, and can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                             Screening, diagnosing and/or treating breast cancer by detecting a change in expression or activity of a breast cancer membrane protein (BCMP) polypeptide or encoding nucleic acid molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

```
reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel polypeptide encoded by an alternative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

This sequence represents a secreted human protein encoded by the nucleic acid molecule designated Gene 66 from the human CDNA clone HTOCD52 (deposited as Clone ATCC 97906 and ATCC 209046). The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin C portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in the new polymucleotides.

Specific uses are described for each of the 186 polymucleotides, based on which tissues they are most highly expressed in (see AAV59511 for
                                                                                                                                                                                                                                                                                                                                                                                                                                Ruben SM, Rosen CA, Fischer CL, Soppet DR, Carter KC;

g

```
The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 CDNA sequences also given in the specification. The protein is used in a pharmaceutical composition used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated human secreted protein for diagnosing, preventing, treating or ameliorating medical conditions and used as a food additive or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 1; SEQ ID NO 548; 129pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 preservative.
                                                                                                                                                                                                                                                                                                                                                                            22-AUG-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-AUG-
disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiod arrest, cerebrous source disorders e.g. cardiod arrest, cerebrous source disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound tealing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents one of the novel human of the printed specification, but was obtained in electronic format directly from USPTO at sequence vov/sequence.html?DocID=6420526B1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host calls, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polymucleotide sequences for the secreted proteins are useful for preventing, treating, ameliorating or diagnosing medical conditions each as hyperproliferative disorders (ag. leukaemia or breast cancers), wounds, reproductive thrombocytopaemia), immunodeficiencies (e.g. haemophilia or thrombocytopaemia), immunodeficiencies (e.g. Miskott-Aldrich syndrome or thymic hypoplasia), aumunodeficiencies (e.g. Miskott-Aldrich syndrome or thymic hypoplasia), authorimente disorders (e.g. arth-versus-host disease, multiple sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), viral or bacterial or fungal infections (e.g. AlDS or sepsis), renal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New genes and its encoded prostate cancer antigen proteins, useful for preventing, treating, ameliorating or diagnosing e.g. prostate cancers, thymic hypoplasia, multiple sclerosis, AIDS, angina pectoris or cerebral ischemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bednarik DP;

```

```
The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding a polypeptide, or its fragment, domain, epitope or species homologue; or a polynucleotide that hybridises under stringent conditions to any one of he sequences of (a)-(0). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medical secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                osen CA, Soppet DR, Carter KC, Bednarik DP; Yu G, Ni J, Feng P, Young PB. Isolated nucleic acid molecules encoding human secreted proteins, useful for preventing, diagnosing and treating disorders associated with aberrant expression and activity.

Claim 11; SEQ ID NO 548; 142pp; English.

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, cancer, haematopoietic disorders, inflammatory capencies are given in the proteins. The nucleic acid molecules may be used to proteins. The nucleic acid molecules may be used to proteins and it is complementary sequences may also be used as DNA probes in disgnostic assays to detect and quantitate the proteins and in assays to identify modulators of SP expression and activity. The anti-SP antibodies and antagonists may also be used to down regulate expression and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence

```
CC represents the amino acid sequence of a human secreted protein. XX

PA0093
enniatin synthetase - fungus (Fusarium sporotrichioides) (fragment)
C;Species: Pusarium sporotrichioides
C;Species: Pusarium sporotrichioides
C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 09-Jul-2004
C;Accession: PA0093
R;Chow, L.P.; Fukaya, N.; Sugiura, Y.; Ueno, Y.; Tabuchi, K.; Tsugita, A.
A;Description: Two dimensional polyacrylamide gel electropheresis of Fusarium sporotrich
A;Reference number: PA0051
A;Accession: PA0093
A;Accession: PA0093
A;Accession: Lype: protein
A;Residues: 1-15 <CHO>
A;Cross-references: UNIPROT:Q7M426
hemocyanin chain SA - Sahara scorpion (fragment)
C;Species: Androctonus australis (Sahara scorpion)
C;Species: Androctonus australis (Sahara scorpion)
C;Accession: D61308
R;Jolles, J.; Jolles, P.; Lamy, J.; Lamy, J.
FEBS Lett. 106, 289-291, 1979
A;Title: Structural characterization of seven different subunits in Androctonus australiances on unaber: A61308
A;Accession: D61308
A;Accession: D61308
A;Accession: D61308
A;Accession: D61308

T. "Occurence and properties of glutathione S-transferases in phenolderading Pseudomonas strains.";

Res. Microbiol. 153:89-98(2002).

-!- FUNCTION: Conjugation of reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles.

-!- CATALYTIC ACTIVITY: RX + glutathione = HX + R-S-glutathione.

-!- SUBGELLULAR LOCATION: Cytoplasmic.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to the GST superfamily.
